Lens restrictions: While there are no restrictions for AXIS, please confirm with your optometrist that your prescription falls within the following guidelines:

1) SPHERE must be from -3 to +4; 2) CYLINDER must be up to -250; 3) ADD must be up to +3.

Frames restrictions:

1) We cannot produce a one-piece lens with prescription. The frames that you select must have a two-lens construction; 2) We cannot use frames that have "pop-in" lenses. The lenses must be able to fit securely into the frame; 3) Lens curvature (Base Curve) is very important, and the maximum Base Curve is 8. Your optometrist can easily measure the Base Curve of the lenses that are currently in the frames that you want to use.

Unused frame:

Please note that if your frame is not suitable for the replacement of the lenses, we will notify you and return it with your order.
